

How to display what is on your computer to your classroom TV.

While looking at your computer's Desktop, **right-click** and a short menu will appear. **Left-click** the ATI Catalyst choice. The Catalyst program will open up.

Clicked on Display Manager on the left panel. On the right side there will be an image of your PC Monitor. Below it in a box will be the image of a TV.

Drag and drop this TV image in the box to the right of the monitor image and choose Clone from the resulting dropdown menu. The resolution automatically changes to 1024 X 768.

Then, click apply and OK.

Using the Local button on your TV remote, cycle to S-Video and you should be able to see the image on your computer on the TV screen.

Note: If the new resolution on your computer is too large for your liking, you can reverse this process, remove the clone, and reset the resolution to 1280 x 1024 (native resolution for these machines).
